

PYTHON ASSIGNMENT MODULE 2

Data field identifier	Data type	Example	Reason
Player_name	string	"M.S Dhoni"	String contains any number of characters
Playing_format	List	Test=[100,200,233] ODI=[100,183,91] T20=[90,55,84]	List can contain any type of data assigned to a variable
Player_name	dictionary	M.S.D={"test":220,"ODI":183,"t20":109}	Dictionary contains list if values assigned to its key which gives view of data
Playing_format	tuple	test=(100,200,300)	Similar to list but is immutable

```
>>>S="M.S Dhoni"
```

```
>>>s
```

```
>>>M.S Dhoni
```

```
>>>Test=[100,200,233]
```

```
>>>Test
```

```
[100,200,233]
```

```
>>>ODI=[100,183,91]
```

```
>>>ODI
```

```
[100,183,91]
```

```
>>>M.S.D={"test":220,"ODI":183,"t20":109}
```

```
>>>M.S.D
```

```
{"test":220,"ODI":183,"t20":109}
```
